Backup4all 4 released!

Softland is proud to announce the final release of Backup4all version 4, a major update of the award-winning data protection software for Windows.

Backup4all 4 offers several major improvements compared to the previous version:

- Due to internal optimizations, Backup4all now backs up large number of files and folders with moderate resource usage
- Option to archive and encrypt files individually when using mirror backup
- Backup can now be paused/resumed/stopped
- Backup/Restore/Test/Cleanup history
- Automatic updates
- Back up empty folders
- The new version has a redesigned interface with a new Backup Properties section.
- "Getting Started" window with shortcuts to main operations
- NTFS permissions and alternate streams are now copied in mirror backups
- Additional views: Backup View and Brief View
- Option to password protect program interface
- Set memory usage for backing up
- Create and use predefined filters
- Limit the number of file versions
- MSI setup for automatic deployment
- Added new views for the backup groups/jobs in the backup list
- Search as-you-type for backup jobs/groups in backup list
- Added combo-box to easily filter backup groups
- Plugin manager to easily add/remove plugins

"The rapid development in the field of storage devices means that people now work with larger files and in a higher number than before. With affordable drives that easily exceed 1TB of storage information and practically can store millions of files, it was clear that the focus of the new version had to be the improvement in handling large quantities of data. This is what Backup4all version 4 does best, backing up large amounts of data with moderate resource consumption and in a timely fashion." said Claudiu Spulber, Softland's PR representative.

Details about Backup4all 4, as well as an evaluation version, are available here:

About Backup4all

Backup4all is a full-featured application that empowers you with a far greater choice of backup options than other backup utilities: Backup4all allows you to create zip backup copies of single files or file folders of virtually any size (supports zip64).

This means that you can access it with any zip compatible utility. It also supports AES encryption so that you can secure your backups, and it allows you to password protect the Backup4all interface.

- The back up process may be executed manually or automatically. Once you have set the backup execution time or interval, the program will control the execution of backup jobs without your interference; plus you can enable email notifications, so that you will receive an email no matter where you are with the status of the last backup.
- The program may save backup copies to the local hard drive, CD, DVD, upload them via LAN or to an FTP location; Backup4all can backup locked or open files (XP/2003/Vista) and has useful predefined backups (like Outlook Express backup).
- The software has its own built-in CD/DVD burning support. However, if you prefer, you can still use UDF format to burn your CDs/DVDs using a packet writing software.
- Backup4all allows you to create exact copies of source files, by using the mirror backup type. Additionally, each file could be archived and encrypted.
- Other features of the program include the following: compression ratio change, AES encryption, email notifications, disk spanning (saved onto several disks), backup statistics, extra actions/programs to perform before and/or after backup execution, command line support, play sounds when backup is finished, erase CD/DVD tool, and much more.

About Softland

Softland is a privately-held software development company founded in 1999. Our company develops its own software products and provides a complete range of custom software development and consulting services. We offer cost effective, innovative and practical solutions for backup operations, paperless office and expertise in client/server software architecture and Internet.

Using Softland's products (Backup4all and novaPDF) and outsourcing services, our clients find creative ways to use information technology, to increase productivity and competitiveness. The result is lower costs and better management of their operations.

Softland is located at str. Traian Grozavescu no. 2/1, Cluj-Napoca, Romania, 400305
